

E7 & E9 Combo

FiiO >>> Why is there such a combo ?

First of all, let's see the different using environment between E7 and E9

1. E7 is a portable USB DAC amp, convenient to carry for outdoor use, also can connect to the computer as a decoder.

<< 2. E9 is a desktop amplifier, it usually connect computer to use at home, without USB decoding function when it works separately.

Then, when you want to use E9 at home, as well want to use USB DAC amp, combo E9+E7 should be the best choice. Now, let's go deep into this combo to clear it up.

A special interface

Nobody knows what's this? when they got the E7 at first time.

It is only used in combination with E9.

E9 Dock connector But not for iPod/iPhone.*

*A special dock of iPod/iPhone ,model is E9i

E7 special base, perfect realization USB connection with audio decoding DAC, also can to E7 charging.

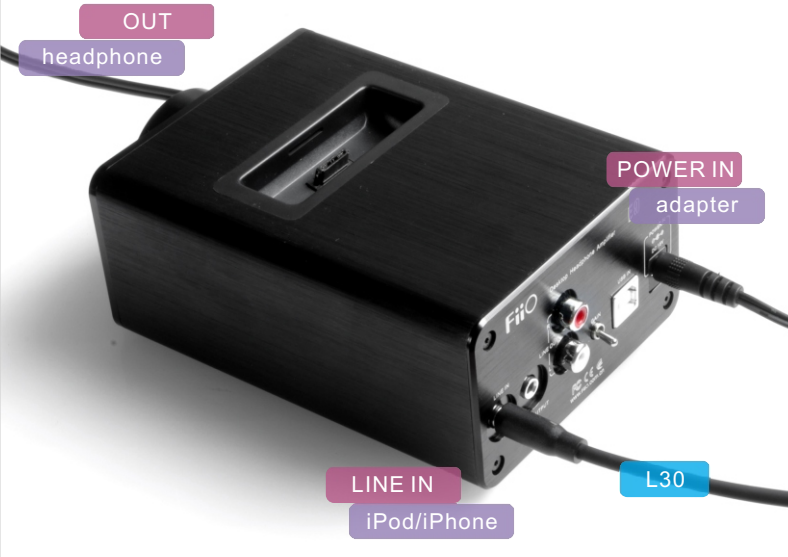

When E7 and E9 docked together

1. The E7 would use it's graphical display to show the volume levels of the E9 in real time.
2. The E7 would turn on or off based on whether the E9 was turned on or off.
3. Turning the E7 off would "remove" it's USB link to the computer.
